

Atera graphclust -> cell type: marker enrichment
rows = clusters (ordered by assignment, * = low confidence)

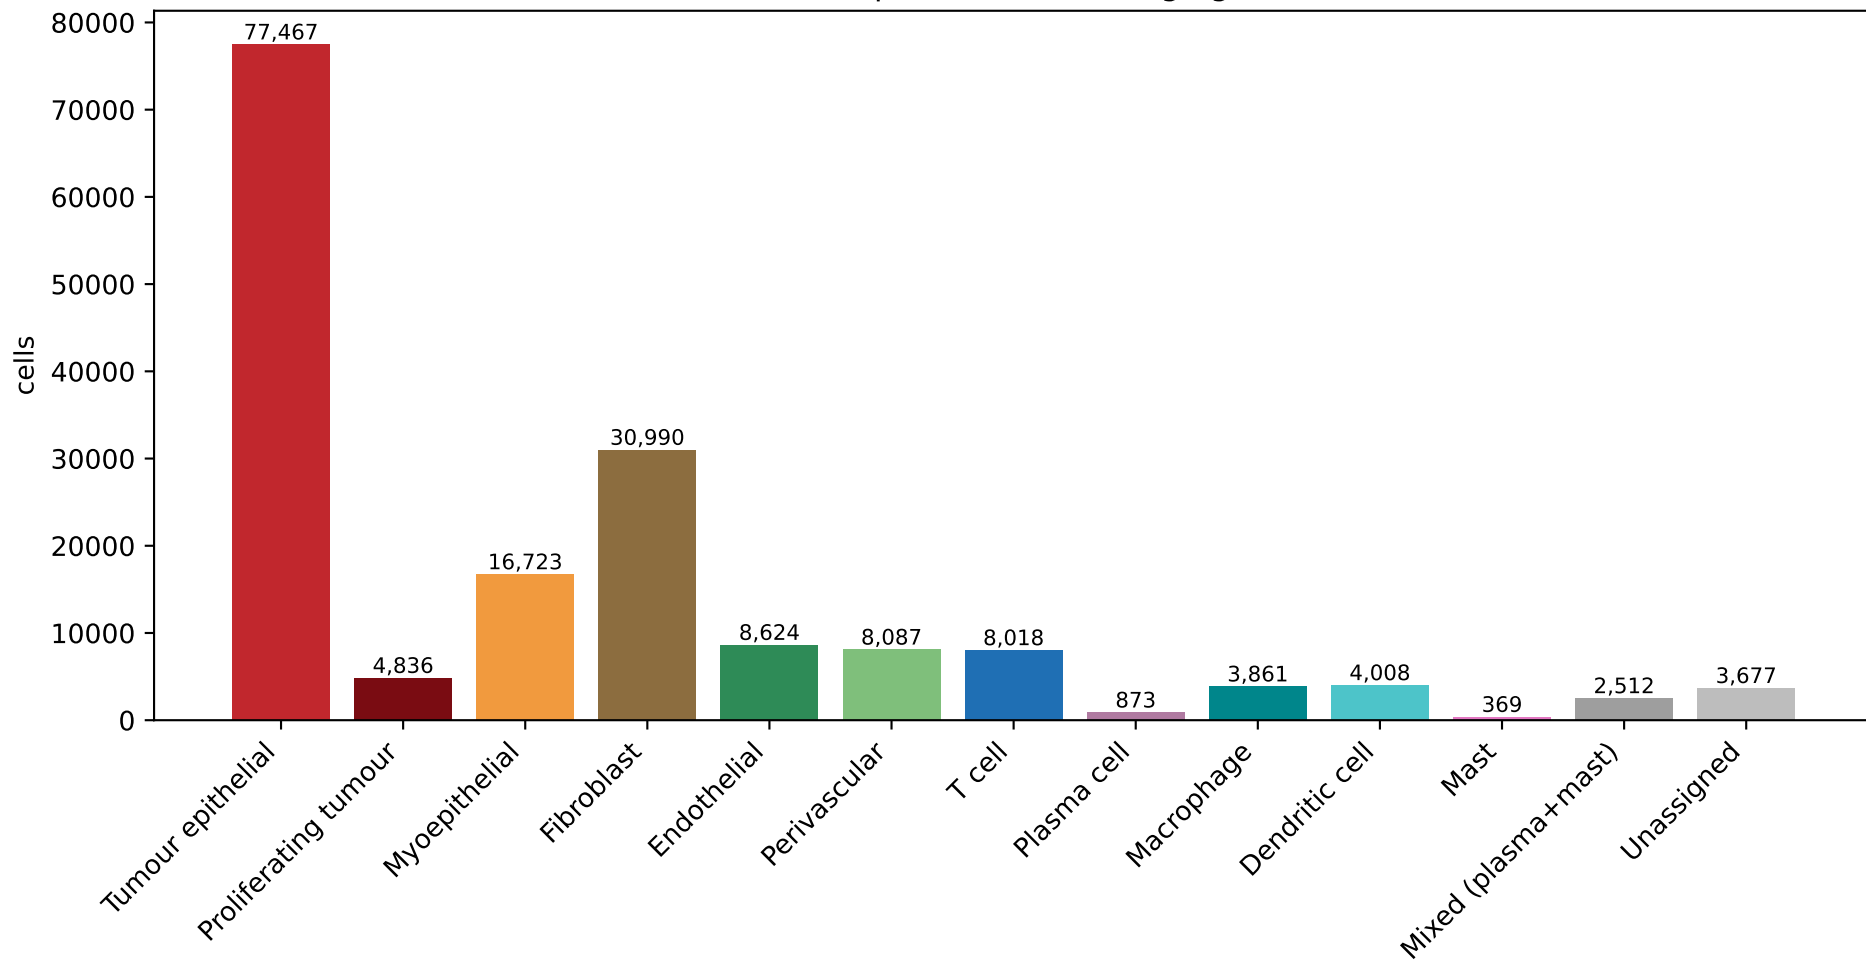

Cell-type score per cluster

white box = argmax kept, red box = argmax overruled (state veto / Mixed / Unassigned)

Whole slide composition after merging 34 clusters

B-cell interrogation: detection rate of MS4A1, CD79A, CD79B, BANK1
no cluster is B-cell dominated, so no B-cell label is forced
